Summary: QMaxx Products Group is the developer and manufacturer of a family of cleaners, lubricants and rust/corrosion protectants and preventatives using Patented Water Displacement Technology. Products are engineered to perform under the most adverse work/industrial and environmental conditions.

Products: **BLU**—Superior CLP for stainless/blued pistols, long guns and shotguns
Black Diamond—Cleans, protects and reduces friction in black guns
Industrial Strength—Strongest rust penetrating and preventative power
SALT—Extreme saltwater rust/corrosion prevention and protection
FRESH—Extreme freshwater rust/corrosion prevention and protection
H2O—Anti-fling technology protects moving parts and chain drives
ICE—Creates a long-lasting barrier against ice and snow buildup
P&L—Reduces friction on locks, nuts/bolts and mechanisms
Superior Tested Formula—General-purpose formulation

Technology: The QMaxx formulation is patented technology providing a unique solution to the destructive and costly problem of rust and corrosion. Because QMaxx has a specific gravity heavier than water, it gets underneath water and actively pushes moisture (humidity, water, ice and snow) away from surfaces. Its solvents dissolve rust. QMaxx then bonds with metal at a molecular level to create a durable, long-lasting barrier between moisture and metal surfaces—to protect and prevent rust and corrosion. Because QMaxx technology works at a molecular level, it leaves NO oily or tacky residue, has NO silicone and creates NO waxy, shellac-like buildup. In fact, the more you use QMaxx, the better equipment functions and the more protective and preventative power to fight rust and corrosion.

Testimonials: “I usually spray my fishing reels down with an expensive spray lubricant protectant before every trip, after I hose them all off at the end of the day I have to reapply. With this stuff [**QMaxx SALT**] after I sprayed it on it lasted for five trips already!!...I already found like 30 applications for this stuff...” – Mike Smedley, Old School Fishing Team

“I cannot tell you how many times we see boats coming into our shop that are completely ruined due to the salt water getting into the engine or by corroding way at the engine. I can almost guarantee that **QMaxx SALT** will be the new product to keep that stuff from happening because it truly is a saltwater displacement, and I have never seen anything work like it before...” – Ron P., Naples, FL

“Being a fisherman, I have grown up around boats. One of the biggest problems we have is the calcium build-up that collects on the lower units. I did not think it was possible but **QMaxx FRESH** not only cleaned the calcium chloride off the boat but it has kept the calcium from re-newing itself...I have never seen anything like it.” Blase F.

“The purpose of this letter is to personally and professionally endorse **QMaxx BLU** as a firearm lubricant and a rust preventative....we found QMaxx BLU not only met our expectations but far exceeded them.” – John Slack, Browning/Winchester Shop Manager

“I decided to try out the **QMaxx Industrial Strength**...and to my amazement it blew PB Blaster out of the water. Not only has QMaxx continued to lubricate the engaging assembly for the mower deck on my lawnmower, but I have not had problems with my lawnmower for months.” – Joe Freidel, World of Outlaws Chief Mechanic

“We enjoyed having **QMaxx H2O** along with us during the rainy last day of the Elite National Championships in Louisville. Our bikes shifted smooth for the whole weekend!” – Kenny Bellau, director, Palmer Cycling, New Orleans

“We carry stainless steel Sig Sauer P2220s, and I’ve always had a problem with rust wanting to form on the non-stainless steel parts...I decided to give the **QMaxx Black Diamond** a try. I cleaned and treated my pistol with it prior to work one day and sure enough I got wet and covered in dirt...I loved the dry feel and was very surprised when I went to clean my pistol. What little dirt was still on it blew right off and there were no signs of rust.” – Officer Michael Waldron
